

BMW MOTORCYCLE EQUIPMENT

**BMW MOTORCYCLE EQUIPMENT:
MAKE YOUR WISHES COME TRUE.**

Riding on two wheels, you can be sure you're always going the right way: straight into a world of fun and adventure. A world full of new experiences, offering you greater freedom and enjoyment with every mile on the road. A world where you will soon find your own way in life, reflecting on body, bike and soul.

So isn't it an obvious decision to also make your individual wishes come true when choosing the right equipment for your motorcycle?

BMW FLAT-TWIN EQUIPMENT: CREATING THE MODERN CLASSIC.

One of the biggest thrills in today's motorcycle world is to return to the grass roots – to the classic world of motorcycling.

This applies all the more when you're able to combine striking good looks with the most advanced technology, as with the BMW R 100 R "Roadster".

The final touch is then added by BMW's unique chrome kit featuring the most refined accessories tailored to these outstanding machines: nine original parts in brilliant chrome – the stabilizer fork, rear grab handle, instrument console, handlebar weights, rear-view mirrors, tank cap, carburetor cover, cylinder head cover, and cylinder guard hoop. All these components come with the same outstanding looks and finish as the entire motorcycle.

And the new windshield then gives this classic machine the final touch, offering the rider the ultimate in riding pleasure.

1
The windshield specially made for the BMW R 100 R allows you to relax and enjoy the trip even on long motorcycle tours. Aerodynamically styled and fastened securely to the handlebar, it takes the wind pressure off your body. Attachments and fixtures available in chrome or black.

2 Roadster riding fun all the way. The BMW chrome kit, the new windshield and the wide range of baggage equipment gives you everything you need on your BMW R 100 R.

3 Two of the nine outstanding items in the BMW chrome kit: round rearview mirrors and handlebar weights.

4 The rear grab handle finished in chrome to make your roadster an attractive machine from every angle.

5 The chrome-plated instrument console accentuates the classic circular dials on your BMW roadster for even better looks.

6 Simply brilliant: the oval cylinder head cover and carburetor cover finished in chrome.

BMW ENDURO EQUIPMENT: ENJOYING THE GREAT OUTDOORS.

BMW GS riders are individualists. They seek challenges in life, looking for adventure in the great outdoors.

So it's obvious that they need the proper equipment that helps handle and endure the toughest conditions. This is precisely what you get from the BMW GS. The sporting and professional equipment available for the GS has been successfully tested at some of the world's most gruelling rallies.

Each individual component, working in conjunction with the entire range of special equipment, prepares the GS for virtually every adventure imaginable, without imposing any limits on your individual aspirations.

1
The Paris-Dakar fuel tank takes you a long, long way, its 9 1/4-gal. capacity offering a range of well over 300 miles. A particularly practical feature on the road is the watertight, lockable storage compartment (0.18 cu.ft.).

2
Whenever you wish to leave the beaten trail, the Paris-Dakar kit gives your BMW enduro almost everything you need to brave even the greatest challenge. Each part is also available separately.

2

5

6

8

9

3 The Paris-Dakar is ready for adventure, equipped with its BMW cockpit fairing and stable tubular frame, rectangular headlights and protection wire.

4 Where the adventurer feels at home: The solo seat on your BMW offers you a secure position and optimum comfort also on long distances. The large and stable baggage rack provides ample space for all your equipment.

5 Taking the bumps out of rough riding, the power plant cover made of glass-fiber-reinforced polyurethane foam helps protect the engine from dust and rocks, water and mud.

7

6 Keeping you clean even in the worst of weather, the extra-wide front mudguard protects you perfectly from dirt and dust.

7 Perfect tuning wherever you go; the GS sports strut offers you no less than 11 different damper settings and 7 levels of spring pretension. This ensures optimum suspension tuning depending on load and track conditions. Additional features include the telescopic fork springs with progressive action and enhanced load-bearing capacity.

8 The extra-long power plant cover extends even further back to help protect the oil sump and silencer, particularly on bumpy terrain. Made of 0.16" aluminum plate.

9 The low version of the front mudguard is ideal for protecting the rider from splashwater on regular roads.

BMW BAGGAGE AND TOURING CASES: GO WHERE YOU WANT AND TAKE WHAT YOU WANT.

The longer your tour, your vacation trip or your excursion, alone or with a friend, the more space you need for your baggage. And this is precisely what you get with BMW's extra-strong motorcycle bags and topcases. They are lockable, easy to fit on your machine, and protect the contents perfectly from rain, dirt and damage.

The fact is, however, that cases often vary in quality and sometimes spoil the handling and riding characteristics of your motorcycle. This is why BMW's motorcycle bags and topcases are tailor-made for your machine so that you can always rely on your BMW for perfect handling, even when carrying a lot of baggage.

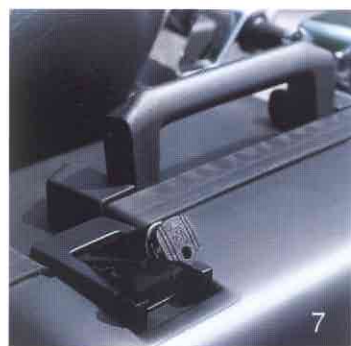

A further advantage is that BMW offers you individual solutions for your individual requirements. For example, the special set of cases for the GS models are asymmetrically designed to fit the high-rise exhaust pipe. There are also many other practical features such as the one-key system for both the ignition and case locks.

Another benefit you can take for granted with BMW cases is consistent, all-around quality, and the reliability and practical value they will give you in years of carefree riding.

1-3
BMW case supports
are available for every
model.

The supports for the K-Series (Fig. 1) and the BMW roadster models (Fig. 2) are made of an extra-strong and extra-light synthetic material, while on all other flat-twin models they are made of steel. An additional crossbar provides further reinforcement for the GS touring cases (Fig. 3).

4
A real miracle in space and capacity; BMW's new extra-large topcase offers 1.23 cu.ft. for all your baggage. Each topcase has a patented lock for quick fastening and a backrest for your passenger. Designed in the same style as BMW's integral cases, the topcase is available as an option with the same key for the ignition and case locks.

5
BMW's small topcase provides an extra 0.7 cu.ft. It is made of robust, impact-proof plastic and is fitted with a long-life silicon seal, rapid-action lock and backrest. Naturally these too are available with one key for all locks as an option.

6
The BMW integral case was designed in the wind tunnel and offers ample space for a helmet (1.23 cu.ft). The case is available with cover finished in body color.

7
Access to the locks of BMW's new integral case is very easy from virtually every angle. As an option, the case comes with the same lock as the ignition and topcase, thus requiring only one key.

8
Small is beautiful. The BMW city cases are just as handy and compact as a briefcase, making them virtually ideal for the office. Offering 0.7 cu.ft. capacity, the city case is suitable for short tours as well.

9
The BMW touring cases are made especially for our enduro models. In order to keep everything in balance, the case on the left is a bit narrower than its counterpart on the right to suit the high-rise exhaust. The capacity of both cases together is approximately 1.75 cu.ft.

THE BMW BAGGAGE RANGE: GIVING YOU FREEDOM WHEREVER YOU GO.

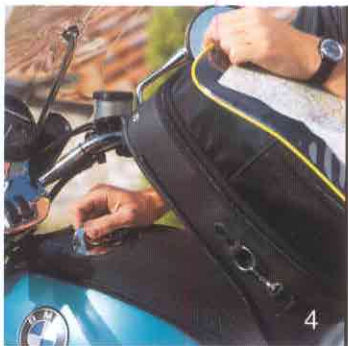

A short ride in the afternoon or a long journey lasting several weeks – obviously, these are both wonderful experiences yet they are worlds apart, especially when it comes to your baggage. So it's extremely convenient that the answer to this dilemma can be found in BMW's wide range of bags and cases. For example the Multivario tank bag with integral rain cover simply grows step-by-step with the amount of baggage you wish to take along.

A further advantage of such flexible bags is that you don't need a fixed support as is the case with the baggage system for the BMW K 1. The styling and looks of your machine remain unimpaired, retaining the unique elegance so appealing to the ambitious rider.

BMW's wide range of inner bags for the topcase and various other cases ensures optimum flexibility on the road. When reaching your destination, all you do is take out the clean bags; the bulky and often dirty outer cases remain on the motorcycle.

1
All set and ready to go. The K 1 baggage system fits securely on the machine by means of elastic tightening bands. Together with the Multivario tank bag this gives you 2.25 cu.ft. of storage space – enough for a long and enjoyable tour. The baggage is made of robust nylon fabric to make it really light, and it features an integral rain hood.

2
The BMW Multivario III tank bag offers variable storage space tailored to your requirements. With its three segments, it grows in capacity from 0.39 through 0.84 to 0.98 cu.ft.

3
The Multivario tank bag in full size offers perfect visibility of the extra-large and easily accessible map holder.

4
Filling up couldn't be easier. Just open two zippers and tilt the entire Multivario bag to the rear for perfect access to the tank filler cap.

5
Your possessions go where you go. Using the adjustable carrier straps, you can take along the upper section of the Multivario bag wherever you go.

6
Interior harmony. A special inner bag is available for all of BMW cases and even for the topcase, allowing you to conveniently take your possessions inside without getting anything dirty.

7
BMW's inner bags come with two-way zipper and adjustable carrier strap. The sturdy bottompiece inside keeps them perfectly in shape, with small odds and ends readily available in the outer bags.

BMW SPORTS ACCESSORIES: TO PUT YOU IN THE MIDDLE OF THINGS.

Riding a motorcycle means enjoying the pleasure of dynamic motion, one of the favorite activities of the sports-minded individualist.

BMW enables the rider to indulge in his sporting frame of mind not only through the choice of his machine, but also through the customized motorcycle equipment he chooses for his particular lifestyle.

And in the development of these components and accessories, BMW places the emphasis not only on looks, but above all on practical value. The motorcycle therefore retains its harmony and balance, which can then be improved upon through the addition of various accessories.

1
The high-tech rear wheel. The BMW sports strut for the K 75 models ensures optimum tuning of the suspension. The damper setting is adjustable to 7 different positions, with pressure adjusting automatically through the dual control system to the load you're carrying and the conditions of road or track.

2
The BMW engine spoiler for the K 75 models comes straight from the wind tunnel to provide a perfect match for the motorcycle's streamlining. The result is even less air drag and improved fuel economy.

3
Do you prefer riding on your own like a genuine sports rider? In that case the BMW solo seat is exactly what you need. Available in red and black for the K and RS models.

4
To give your K 75 even more dynamic handling properties with ultra-low cornering angles, BMW offers you special sports footrests.

5
Three-spoke wheels made of top-quality light alloy give your BMW even more dynamic looks. And to add important practical benefits, unsprung weight is further reduced and handling at high speeds improved. Available for the BMW K 75 and K 75 RT, also with ABS.

BMW COMFORT ACCESSORIES: ENJOY THE PLEASANT SIDE OF LIFE.

Every BMW comes with all the amenities for meeting the rider's fundamental comfort requirements. This starts with the ergonomics of the seat and continues through the design of the controls, instruments, and the suspension tuning.

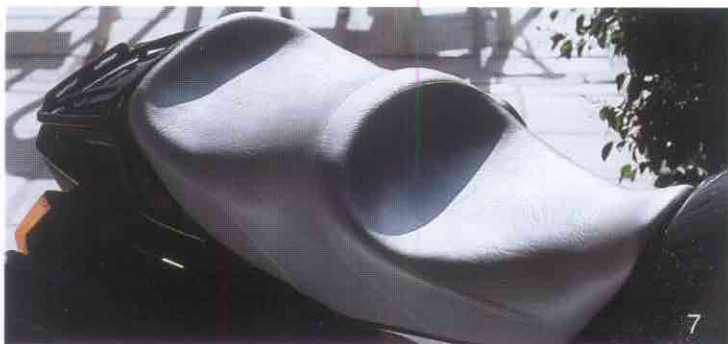

A long list of sensible options then gives you the freedom to fulfill every one of your comfort requirements. Just consider the high-comfort seat for the long-distance touring or the heated handles to keep your hands cosy and warm even in the coldest weather, with soft-rubber padding to help ensure a perfect grip. Another example is the key with micro-torch allowing you to find the ignition even more quickly in the dark. And there are many other good ideas for making life as pleasant as possible both on the road and when riding off the beaten track.

Music is also available to make your motorcycle tours even more enjoyable. The BMW motorcycle radio with cassette player have been specially developed for our touring machines with attention paid to every detail. So that you can concentrate fully on the road and traffic conditions while enjoying music at its best.

1 Heated handles keep your hands warm and ready to act even in sub-zero temperatures. These handles come complete with two-stage switch for cold and very cold weather.

2 Feel your fingers tingling? BMW soft-rubber handles help reduce vibration and thus result in better control of the motorcycle.

3 High-fidelity all the way. The BMW Sound System comes with two-way loudspeakers each providing an output of 40 W. The speakers fit perfectly into the tourer fairing. Optional rear speakers are also available.

5 To add the final touch to riding comfort, the windshield on the BMW K 75 RT can be adjusted individually, even while on the road, according to rider size and speed requirements. All it takes is a press of the button to set the windshield electrically to the desired height and angle.

4 Sound machine. The BMW motorcycle radio has been designed and built especially for motorcycling. It features radio AM, FM stereo, station buttons, and stereo cassette player. Volume and station search are automatically controlled by remote fingertip operation.

6 Equipped with the BMW high-comfort windshield, the K 75 RT allows the rider to sit upright in a relaxed style, efficiently protected from wind and weather even at high speeds.

7 Upholstery at its very best. The more miles you cover a day, the more you will appreciate BMW's high-comfort seats which are extra wide and have ideal body contour.

9 For the night rider, the key comes complete with a micro-light which helps you find the ignition lock in the dark.

8 Kneepads keep you directly in touch with your BMW. Specially made for the K-Series.

OPTIONS AND SPECIAL EQUIPMENT FROM BMW: FEATURES YOU WILL NOT FIND ELSEWHERE.

At BMW we feel it is our responsibility to offer the rider as many customized options as possible. This includes a variety of sensible fitments which provides your motorcycle with additional protection and further enhances your joy of riding.

First, there's the protection we offer you from damage on the road. BMW cylinder and engine guards protect the flat-twin and K-engines from damage even in severe cases. Second, there's the additional protection we offer you against theft. The BMW anti-theft warning system immediately sounds an alarm when your machine is moved by an unauthorized individual. Third, BMW's hazard warning flashers offer extra safety whenever parking at the edge of the road. There are many additional instruments in the cockpit which ensure that you have all the information you need when you need it.

The rider of a BMW motorcycle can always be sure that every component of the motorcycle is nothing short of top quality. This means that each part is just as functional and reliable, long-living and practical as you would expect a product from BMW to be. Where else can you find such versatility in absolute perfection?

BMW has thought of everything – all you have to do is make your choice.

4 Safety first. BMW hazard warning flashers can be retrofitted easily on all BMW machines.

5 Keeping exact time in a new age. The BMW digital clock powered by the on-board electrical system is now also available on our GS machines (from '91 model on).

6 The BMW voltmeter shows you the exact battery charge, and the quartz clock (Boxer) or digital clock (K-Series) tell you the exact time.

7 Everything where it should be in the cockpit. The BMW coolant temperature gauge and fuel gauge for the K 75 RT is available only in conjunction with the high-comfort windshield (see page 15, Fig. 6).

8 The self-adhesive ABS badge shows everybody that your BMW is ready for sudden surprises.

1 The efficient way to avoid scratches and bumps. BMW engine guard made of extra-strong steel with stable three-point fastening helps protect the engine even in the worst of situations.

2 A classic engine deserves classic protection. The cylinder guards safeguarding the BMW Boxer power plant, are made of special polished and chrome-plated steel.

3 Once your BMW is fitted with our anti-theft warning system, you can park your motorcycle in the dark without having to worry. The electronic alarm system is set off as soon as the side angle of your motorcycle is changed, whenever there is any serious vibration, and when the horn cable fitted as standard is interrupted.

EVERYTHING YOU NEED AT HOME AND ON THE ROAD.

The enthusiast wishing to maintain the lasting value of his BMW will place great emphasis not only on regular service, but also on thorough care of his machine.

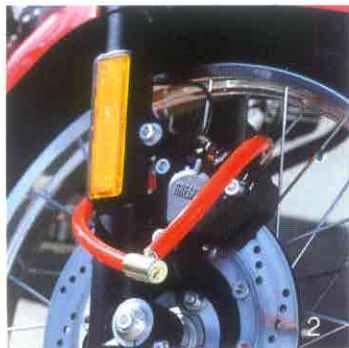

This is precisely why BMW offers a complete range of motorcycle care products. Each item is made specifically for BMW motorcycles to ensure that the many different materials – paint, plastic, metal – are always treated properly.

Of course, it's equally important to take good care of your motorcycle not only at home, but also when you're on the road. This is especially true when you're far away from home and possibly a long distance from the nearest service station or workshop. Even then, BMW has everything you might need to help yourself. Since BMW does not make compromises, all of our products are of top quality and assist you in every situation. The objective, therefore, is to give you undaunted riding pleasure – an opportunity to enjoy freedom on two wheels at its very best.

And this, quite simply, requires more than "just" a first-class motorcycle. Practical motorcycle equipment and rider wear, interesting motorcycle tours and rider training, outstanding service and individual advice, are equally essential. For these are the ingredients which go into sheer riding pleasure the BMW way.

1
Just right whenever you need them. The supplementary tools, made of top-quality hard-chrome plated and polished (11 items for the K-Series, 20 for the flat-twin models), provide a perfect match for the on-board toolkit.

2
The BMW steel cable lock, coated in plastic and ultra-flexible, fits conveniently beneath the seat.

4
The BMW service kit is designed to provide quick and efficient repair of tires with tubes. It comes complete with fitting tool and mini-pump.

3
BMW service kit for tubeless tires, helps to ensure that you can reach the next repair shop without any hassle.

5
BMW's special range of care products for cleaning your motorcycle and the fairing. Products: paint cleaner, cleaning kit with manual spray, cleaning brush and sponges. And for cleaning requirements on the road there's the visor and helmet cleaner complete with refill.

6
The dry-charged BMW Mareg battery offers an ample 25 AH.
