New air filter system on model R 27

Commencing with frame No. 379 582 the motorcycles of the model R 27 have a Micronic-type air filter as standard equipment. Thus the service life of the engine will be further increased.

At the same time, because of the increased resistance offered by this filter, the main jet of the carburetor had to be reduced from No. 120 to 115.

For a subsequent conversion which may also be carried out on the model R 26, this should be held in mind.

Besides, when installing care should be taken that the securing pin on the air filter box fits exactly into the recess on the sealing surface of the filter bottom in order to ensure a snug contact.

Part numbers:

Micronic filter, complete consisting of: Filter bottom with gasket, filter cartridge, filter upper part and securing screw	00 43 002
Micro-star cartridge	00 43 142
Main jet Nr. 115	00 39 245
Carburetor complete, with main jet 115 for R 27	00 39 009

Yours faithfully,
